

Solutions for demanding tasks

The material and its specific characteristics as well as the application in question and its individual configuration determine the conveyor. An exact design is therefore a basic prerequisite in order to achieve an economic installation. It is also the surety for enduring reliable material transport between the individual stages of industrial processes. The more demanding the conveyed bulk material becomes, the truer this becomes: If hot, abrasive or sticky bulk materials are involved or either a constant inert gas atmosphere or controlled cooling must be guaranteed, AUMUND Fördertechnik has gained an excellent reputation in many sectors. For example, there is special know-how in the fields of:

- Cement, lime and gypsum industry
- Steel and aluminium production as well as the foundry industry
- Power generation
- Port and handling logistics
- Minerals and fertilisers
- Alternative energy-bearing materials and the recycling industry
